Sofford. 1618.

A New Almanacke, and Prognostication, for the yeare of our Lord God, 1618.

Being the second from the Bissextile or Leape-yeare.

Calculated and precisely verified for the Latitude and Meridian of the most Honourable Citie of London, where the Pole is exalted 51. Degr. and 34. Min. And may very well serue for most parts of great Britaine.

By *Arthur Sofford*, Philomathist.

Os homini sublime dedit cælumq; videre
Iussit, et erectos ad sidera tollere vultus.

LONDON:
Printed for the Company of *Stationers.*

The common Notes and moueable Feasts for this present yeare. 1618.

Since his happy comming to London, The seauenth of May.		15

The Anathomy of mans body; as the parts thereof are gouerned by the xij. Signes of the Zodiaque.

Aries head and face.

Taurus neck & throat.

Gemini armes & shoulders.

Cancer breast stomack & ribs.

Leo heart & backe.

Virgo bowels & belly.

Libra reins & loynes.

Scorpio secret mẽbers

Sagitarius thigs.

Capricornus knees.

Aquarius legges.

Pisces the feete.

A necessarie

A neceſſarie and perfect Rule to know the beginning and ending of euery Terme with their Returnes.

Hillary Terme beginneth the 23. of January, if it be not Sunday, and endeth the 12. day of Febuary, and hath foure Returnes, viz:

Octabis Hillarij.	Craſt. Purificat.
Quind. Hillarij.	Octabis Purific.

Eaſter Terme beginneth 17. dayes after Eaſter, and endeth the munday after the Aſcention, and hath fiue Returnes, viz.

Quin. Paſchæ.	Quinque.	Craſt. Aſcen.
Tres Paſchæ.	Paſchæ.	Menſe Paſchæ.

Trinity Terme beginneth the next day after Corpus Chriſti day, and endeth the wednesday fortnight after, and hath foure Returnes.

Craſt. Trinitat.	Quind. Trinit.
Octab. Trinitat.	Tres Trinit.

Michaelmas Terme beginneth the 9. or 10. of October, and endeth the 28. or 29. of November, and hath eight Returnes, that is to say:

Octabis Mich.	Craſt Anima.
Quinden. Mich.	Craſt. Martini.
Tres Mich.	Octabis Martini.
Menſ. Mich.	Quind Martini.

Note also that the Exchequer openeth eight dayes before any Terme begin, except Trinitie, in which it openeth but foure dayes before.

Ianuary hath xxxj. dayes.

K. Iam.	1602 March 24	After writing 16 .y.	

A Deſcription of the Foure Quarters of the Yeare. 1618.

Of Winter.

VPon the xi. day of December, in the laſt yere of grace 1617, 45, min: after high none (according to the Phœnix & mirrour of moderne Aſtronomers Tycho de Brahe,) did the glorious body of bright ſhining Apollo approach to his vttermoſt limit of South declination from the Æquinoctiall line, viz 23. deg: 31. min: & 30 ſec. caſting his beames obliquely, and in ſlanting manner, vpon the ſurface of this our Northerne Inhabitance, therby making the ſhortest day & longeſt night, being then mounted aboue our Horiſon 14. deg: and 56 min at which very inſtant did the Winter quarter of this yeare 1618. take his begining.

Touching the ſtate of this ſeaſon I coniecture (by the heauenly poſitions at the beginnig thereof) that the ayre will abound with thicke, darke, obſcure, and duſky clouds, with raine & ſnow; by reaſon that Saturne is chiefe dominator in this Winter Sceam, being in the aſcendent in Taurus, a ſigne cold and dry, of earthly triplicity agreeing to his owne nature, and being alſo occidentall of the Sun, and retrograde, threatneth much raine & ſnow, but it will be ſo much the more temperate by reaſon that Saturne is aſpected of Iupiter, & Venus, temperating him with their auſpicious beames.

Of the Spring.

THe Sun the moſt glorious & beautifull eye of the world, & exceeding ioy of all mortall creatures, comming from ſurueiyng the earth round about, leauing not one part therof hid from his bright ſhining beames, doth begin to take his old & accuſtomed taſke againe, vpon the x. day of March, at one of the clock, & 53 min: afternone, entring then the firſt ſcruple of the Æqui-

æquiall signe Aries, making the night equall to the day to all the Inhabitants of this Globe of mortality: giuing beginning to the Spring being the second quarter Astronomicall of this yeere, the constitution of the heauens being at that instant on this sort, as you may behold in this Sceame following.

The weatherage of this quarter seemeth to me to be very hot & sweltring, by reason that Mars beareth chief dominion in the figure erected, being ioyned to the sun in Aries one of his houses, & because that Leo a signe of the fiery triplicity is then ascending. Moreouer, because Saturne is best dignified in the figure nexte to Mars I gather that there will bee now and than some great stormes, and darke weather.

Of

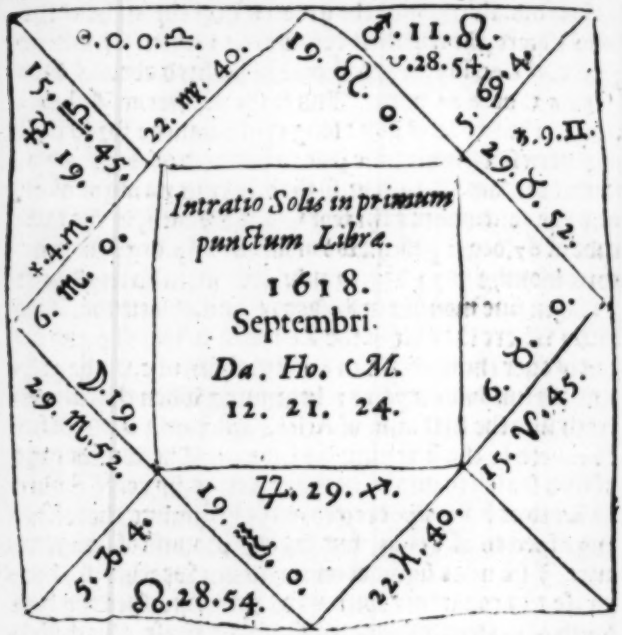

Of the Summer.

The Summer quarter of this yeare Aſtronomical taketh his beginning vpon the 11. of June, at 6. of the clock, & 5. min: afternoone, at which very inſtant, the ſun entring into the firſt ſcruple of the tropicall ſigne Cancer, is arriued to the farthеſt limit of Nozth declination, and higheſt pitch of altitude aboue our Hozizon, viz. 62. deg. & 6. min. making the longeſt day & ſhozteſt night, by reaſon of his greateſt arch of ſun-ſhine, & pzoiecting his beams mozeperpendicularly vpon the ſurface of our Hozizon, making very ſharpe angles by their reflection vpward, doth pzoduce the greateſt heat thzoughout the whole yeare, the day then containing 16. hou: 25. min: & 33. ſec. at London, where ☿ pole is moũted aboue ☿ Hoꝛiſon 51. de: & 34. min: And to the nozthеrne Inhabitants, the day is of mozе long continuance: foz in that nozthern ſcite where the pole is elеuated 66. deg: & 32. min: it containeth 24. hou. ſo that there is no night at al, and the continuance thereof is one Month, in the latitude of 67. deg: 23. min. two months in 69. deg: 50. min. thzeе months in 73. deg. 39. min. four months in 78 deg: 32. min: fiue months in 84 deg. 6. min. of latitude. And laſtly where the pole is the Zenith oz verticall point diꝛectly ouer the head. viz. in 90. deg. of latitude, the day cõtinueth full halfe a yeare: beginning when the ſun entreth into the firſt min: of Aries, and continueth till heé commeth to the firſt min: of Libra. The wertherage of this ſeaſon ſhould be very temperate, by reaſõ Saturn is Lozd of ☿ Sceame erected at the beginning therof, being aſpected of Venus, but foz al ☿ pzomiſe of temperature, I ſeé mozе ſigns of tempeſtuous weather, firſt becauſe ♄ is copartner with ♃ in dominion, aſpecting him with a □. ſecondly, becauſe that ☾ likewiſe aſpecteth ♃ thirdly becauſe of the ☌ of ♄ and ☾ vpon the 29. of May, going befoze the 19. degreé of Virgo, beeing aſcending at the time thereof: All which doe euen concurre

as it were in a Sympathy, to the producting of tempestuous weather, as Thunder, Lightning, & such like.

Of Autumne.

The last quarter Astronomicall of this yeare, beginneth when the Sun entreth into the first scruple of the Æquinoctiall signe Libra, which hapneth this yeare the 3. day of September, at 9 of the clocke, & 24 min: in the forenoone, making once againe the daies equall to the nights throughout the whole world. The constitution of the Heauens being at that instant on this sort: as you may behold heere obiected to your view.

The state of this quarter, for as much as I can coniecture, will be temperate inough, fitting and agreeing to the vsuall manner thereof.

Of

Of Eclipſes. 1618.

THere will be preſented to the vieWe of the Inhabitants of the earth, this preſent yeer three Eclipſes, two of ỹ Sun, & one of the Moone, howbeit neither of them will appeare viſible in our Horiſon. The firſt of the ſuns happning vpon the 16 of January, 44. minuts, afternoone. The ſecond being of the Moone happning vpon the 30 day of January, about one of the clocke, & a quarter in the afternoone. The third, b eing of the Sun, will happen on the 11. day of July, at 7. of the clocke & 27 minuts in the after noone.

But ſeeing that none of theſe Eclipſes will be ſeene of vs: I ceaſe to Write any further of them.

To know when the Moone will be South any day of the yeare.

The ☽ age.		Her comming to South.	
1	16	12	48
2	17	1	36
3	18	2	24
4	19	3	12
5	20	4	0
6	21	4	48
7	22	5	36
8	23	6	24
9	24	7	12
10	25	8	0

12	27	9	36
13	28	10	24
14	29	11	12
15	30	12	0

TO find the Moones comming to south doe thus, find her age, that is, how many days she is paſſed from her change to the day required, with which enter this table in the Collume vnder the Title of the Moones age, where hauing found the dayes of her age, right againſt it in the Collume vnder the title of her coming South, you ſhall haue the houre and min: of her comming South. For example, the xxii. of Jan: 1618. I find the ☽ to be 6. dayes old, and therfore ſhee is south at iiii. & 48 minu: And you muſt note that all the increaſing ſhe commeth to the ſouth in the euening, following the ſun, but in the decreaſe in the morning, going before the Sunne.

A Table of the Semidiurnall Arch of the 12. Signes, shewing the rising & setting of the Sunne and Moone, with the length of day & night, &c. Newly Calculated for the midst of the right Climate.

To

To find the Semidiurnall Arch of any *Signe and Degree.*

THe Semidiurnall Arch is the halfe continuance of any ſigne and degree aboue the Horizon, which is thus found: Enter with the ſigne and degree in the Colume of the former Table noted with this Letter S ſignifiyng ſigne, and right againſt it in the broadeſt colume noted with the letters H. M. ſignifiyng houres and minuts, you ſhall haue the Semidiurnall arch of that ſigne and degree which you entred into the Table withall. As for example, I would know the ſemidiurnall arch of the 6. degree of Leo, (that is, I would know the halfe continuance of the 6. degree of Leo aboue our Horizon) firſt there ſeeking the ſaid ſigne and degree in the colume intituled with S. I find right againſt it in the colume noted with H M. 7. houres and 41. minuts, which is the ſemidiurnall arch of the 6. degree of Leo.

To know the time of the Moones riſing, ſetting, and ſhining.

HAuing found the time of the moones being at ſouth, as I haue ſhewed before, repayre to the fourth Colume of the Kalender, and there finding the ſigne and degree that the moone is in for the day propoſed, and according to that ſigne & degree find the ſemidiurnal arch of the ſame, as I haue taught you in the rule next before going, which ſemidiurnall Arch taken from the time of her comming ſouth before found, you ſhall haue in the remaine the time of her riſing, then ad the ſaid ſemidiurnal arch to her comming ſouth, you ſhal produce the time of her ſetting, & if you double the ſaid ſemidiurnal arch, you ſhall haue the whole time from her riſing to her ſetting. Example, the ſaid 22. of January being found to be ſouth at 4 a clock & 48 min: ſhe is then by the Kalender in the 30. deg: of Aries. find-

Finding then according to the former rules, when the Moone is in the 30. degree of Aries, what his semidiurnall arch is. viz 7 houres, 10 minuts, which subducted from the time of her comming south at 4 hou. 48. min. afternoone, leaueth the time of her rising to be at 9, of the clocke, and 48. minuts afore noone, which 7. houres, 0. minuts, being added to her comming to south, produceth 11 of the clocke, and 48. minuts, at night. for the time of her setting. Againe, 7. houres, 0. minuts doubled, giueth 14. houres, 0. minuts for her continuance in our Horizon from her rising to her setting.

Now for her shining, if you substract the time of the sun-set, from the moone setting in the encrease, or else in her decrease, by taking the time of her rising from the Suns, the remaine sheweth her shining.

Of a day Naturall, Æquall, and Artificiall, of the partes, quantities, and diversities of *Dayes*.

A Day is Two-fold, Naturall, & Artificiall: a day naturall is the space of time, wherein the Æquator accomplisheth one whole reuolution according to the first mouer, and such a further portion of arch thereof as doth answere to the dayly motion of the Sun: And this day contayneth alwayes 24. houres for the most part. But a day Artificiall is the space of time, the Sun maketh his abode aboue the Horizon, or is carried from the East by the midst of Heauen to the West, and is the one part of a naturall day. The other part being the time of the suns abode vnder the Horizon,

ʒon, and is called night: both which parts ioyned together make a day Naturall. The variety of dayes and nights Artificiall is manifested to all, which commeth to passe by reason of the suns approach and departure from the Zenith or poynt ouer the head, as also according as the Pole is elevated more or lesse. Furthermore the parts of a day Naturall are 4. viz, Morning, Noone, Evening, and Midnight. Morning or the rising of the Sun, is the moment when as the Sun appeareth on the Easterne Finitor, or Horizontall Line: Noone, when the Sun is on the South or Meridian Line, and cannot mount any higher that day: Evenning, when the Sun possesseth the cusp of the West. Midnight, when the sun arriueth to the Meridian Line vnder the Earth. Moreouer, as there are diuerse Nations, so doe they diuersly begin their dayes. Some begin to reckon the houres of their dayes from the sun rising, as the Persians, Babilonians, and Norimbergians. Some from sun-set, as the Ægiptians, Bohemians, Polonians, and Italians And others from mdnight, as heere in England, the Seauen vnited Prouinces, and some parts of Germanie And lastly the Astronomers, with the Vmbrians, and Arabians, at noone or midday.

To find the Length of the Artificiall day *or night, Sun-rise, & Sun-set.*

FInd your Moneth in one of the Columnes of the Table of the semidiurnall arch intituled with this letter M. signifying Month, and the day of your Month or the nerest thereunto in the Collume next adioyn-

ioyning to that noted with the letter D. for dayes of the moneth, and that which you find directly against it in the Colume noted with H. M. is the semidiurnall arch or halfe continuance of the sun aboue our Horizon, which being doubled produceth the length of the day. Which length of the day being substracted out of 24. hours, viz. the length of the naturall day, sheweth the length of the night. Also the semidiurnall arch substracted from 12. hours, viz. midday, sheweth the time of Sun-rise, and the semidiurnall arch it selfe, sheweth the time of Sun-setting, according to our Clockes.

Example

1618. the 7. day of January I would know the length of the day and night, Sun-rise, and Sun-set. First therefore by the rules afore giuen, I find the semidiurnall arch of the Sunne vpon that day to be 4. houres, 40. minuts, which being doubled, produceth 9. houres, 20. minuts, for the length of the day, which substracted out of 24. houres, there remaineth 14 hou: 40. minuts, the length of the night.

Againe, the said semidiurnall being substracted from 12. houres, or naone-tyde, there remayneth 7. houres, 20. minuts, for sun-rising.

And lastly, the semidiurnall Arch it selfe, viz. 4. houres. 40. minuts, is the time of his setting.

A Briefe tide Table ſhewing the times of full Sea in all the Principall Havens in or neere about England.

Quinboro, Southampt: Portsmouth, Wellins. Flaud. the Spitts, the Sleeue along the ſwyne,	0000
Redbau, Aberden, Weſt end of the Noze.	00 45
Graueſend, Downs, Temt, Romny Rankins,	1 30
Dundee, St. Andrews, Lisboue, Silly, St. Lucas,	2 15
London, Tinmouth, Hartlepoole Byſcay, Britaine,	0
Galcoigne, Galicia, Portugall,	3 0
Barwick, Oſtend, Fount, Blankenboze,	3 45
Frith, Leith, Dunbar, Narbon,	4 30

Foy, Lin, Humber, Plym, Mountbay, Antwerp,	6 0
Briſtol, Lamon, Foulneſſe,	6 45
Milford, and Bridgewater,	7 30
Portland, Peterport, Harflu, & the Hage,	8 15
Dikney-Poole, st. Helens, Dzwell, Embden,	9 0
Needles, Deepe, Calket, Lux, Lenor,	9 45
Harwich, Parm: Wight, Doner, Noꝛth. Bullen,	10 30
Calice, Calſho, Rye, Winchelſey.	11 15

Adding the houres & min: adioyning to the Portes in this Table contained, vnto the mones comming ſouth, produceth the time of the tydes in the ſame Portes.

Phiſicall Obſeruations.

Three things are chiefly to bee reſpected in the vſe of Purgations: that is, the Time, the Age, and the Manner of the miniſtration thereof. As touching the firſt in electing a fit time for the taking of Phyſick, you are to take heede that it be not taken in the time of extreame heat or cold, for ſo ſayth Hyppocrates, part 4. Aphoriſm. 5. Purgations and the adminiſtration of Phyſicke is daungerous about the Dogge-dayes.

And

And in the 6. part, 46. Aphorisme, he sayth that the Spring, and Autumne, are more conuenient for Phisick then Winter or Sommer. For in Sommer the humors boyle through heate, causing annoyance to mens bodies through their sourcing.

Touching the second point to wit the Age, you are to note that decrepit old age, and young infancy are vnfit to take Phisicke, as Arnoldus de villa nova saith, Children & decrepits must forbeare Phisicke. Also it is dangerous in youth, for whosoeuer taketh much phisicke in youth, will deplore the ruth of age.

Concerning the third poynt the manner how the persons to whom purgations is to bee ministred ought to be attended, for those that haue sound bodies ought not to take Phisicke, as Hippocr. witnesseth in the second part 36. Aphorism. Neither ought we to forget according to the opinion of Albumasar, that the fittest time for purgations are to be elected according to the motion of the moone in watry signes, viz Cancer, Scorpio, and Pisces.

Others also thinke the first halfe of Libra, and Aquarius, to bee conuenient: When the Moone is voyde of course, the time is indifferent fitting for purgations.

The Moone in Cancer in Sextile, or Trine aspect of { Venus not combust profiteth in euacuating Coller. Sol auaileth in purging of Phlegme. Iupiter helpeth to expell Melancholy. } with Electuaries.

The

The Moone in Scorpio in Sextile or Trine aſpect of. Venus furthereth to purge choller, Venus not combuſt. Sol auaileth to purg phlegm Iupiter profiteth to purge Melancholy. with Potions.

The Moone in Piſces in a Sextile or Trine aſpect of Venus good to purge choller Venus not combuſt. Sol auaileth to purge Phlegme. Iupiter auaileth to purge Melancholy. with Pills

Briefe Rules of Husbandry.

Sowe, ſet ſeedes, plant and graft the Moone in Taurus, Virgo, Capricorne, or Aquarius, & wind not eaſterly.

Sheare Sheep in the increaſe of the Moone.

Fell Tymber for building, towards and in the laſt quarter of the Moone.

Fell fryth and Coppice for ſewell in the 1. quarter.

Geld & lib cattle the moone in Aries, Sagittarius, or Capricorne.

Kill fat Swine for Bacon, about full Moone.

Cut Vines in Febꝛuary or March.

Remoous Trees at the laſt quarter, betweene Hollantide, and Twelfetide.

Libri de ſe hexaſticon.
